SAN JOSE, CALIFORNIA

P.O. Box 343

December 1, 1931

LIST 3111

COVERING STOCK OFFERED BY

Phone BAllard 1776

CLARKE NURSERY CO.

SAN JOSE, CALIF.

SEASON 1931-1932

PLEASE NOTE

All summer quotations not accepted to date are hereby cancelled ulture,

Terms. To buyers of known or established credit, 60 days from date of invoice. Otherwise cash with order or 25 % with order, balance C.O.D.

Grading. Plants that are wider than tall are graded by width.

Quantities. Five or more plants of one kind and size will be supplied at 10 rate; 50 or more at 100 rate; 500 or more at 1000 rate. For less than 5 of one kind and size add 20% to 10 rate.

Pots. Prices on pot grown stock do not include the pots and unless otherwise instructed plants will be removed from pots before shipping. If wanted in the pots they will be charged for at cost, but can be returned if desired and credit will be given.

Packing. Will be charged for at cost as usual, including paper pots if used. Plants will be packed to secure lowest possible freight classification consistent with the nature of goods shipped. All prices are at our nursery unless otherwise stated. Packing free if cash comes with order.

Shipping. Our responsibility ceases when goods are delivered to transportation company in good order. They travel at buyer's risk. Please state distinctly whether you wish goods shipped by freight or express and where water shipment is possible be sure to specify by water or rail as you may prefer.

Nomenclature. Plant names, both botanical and common, conform with 1923 edition of "Standardized Plant Names," with the addition of a few common names widely used on the Pacific Coast.

This list covers items of which we now have a fairly good supply unsold. Many other things can be furnished in moderate quantities and quotations will be made on request. So if you want any ornamental stock not listed here write us about it.

This list is for the trade only and all prices are strictly net. Landscape Architects and Landscape Gardeners who are not actual nursery men will be charged 20% in addition to the rates quoted herein.

HESPEROYUCCA whipplei

Lining Out Stock

We offer many items in small sizes for growing on. They are not listed separately but will be found at the end of each item if any stock is available for that purpose. We particularly call attention to grafted conifers in 4-inch pots.

Abbreviations

It is important for buyers to know whether they are getting seedlings or cuttings, etc., so for every item we have shown how it was propagated using the following abbreviations:

> -cuttings G—grafted

S—seedlings B—budded

Unless otherwise stated all plants in this section will be balled at prices quoted.

NOTE—A large proportion of our conifers are grafted on seedling roots which gives them a far better root system than when grown from cuttings.

We call particular attention to grafted conifers offered in 4 in. pots. These were grafted on $2\frac{1}{2}$ in. pot stock in Summer 1930, transplanted to 4 in. pots in Spring 1931 so now have had a full season's growth. This gives them an excellent root system and makes them far better and more profitable for growing on than newly grafted stock in $2\frac{1}{2}$ in. pots. We use this 4 in. pot stock for our own planting and can recommend it highly to our customers

PYRACANTHA (Continued)	10 rate	100 rate
formosana splendens (new) This splendid novelty originated with us several years ago, but we have never been able to list it before as all stock has been ordered ahead by nurserymen who had seen the original plant in berry. In freedom of production it far surpasses any other Pyracantha or Cotoneaster. The berries are rich red, highly glossy and borne in astounding profusion. We regard it as far and away the best red berried plant grown. 4 in. pot, 1 ½ to 2 ft. C	.50 .40 .30 .25	.35 .25 .20
This also has points of the greatest merit. It blooms so profusely as to be valuable as a flowering plant. The berries, equally profuse, are glossy orange and produced all along the long slender shoots. Will be of the greatest value as a producer of cut decorative material.	50

FLOWERING APRICOTS		
All the Japanese apricots are varieties	of	
Prunus mume. The flowers resemble tho	se	
of the flowering peaches but they have the	ne	
great advantage of a pleasing carnation	n-	
like fragrance while peaches are scentless.

FLOWERING CHERRIES

We have specialized on these beautiful trees for years and have the largest commercial collection in the U. S. A. All propagation is direct from our own specimen trees. They are correctly and authentically named. Below are descriptions of varieties still available for this season. Any further information will gladly be given on request.

ERECT GROWING VARIETIES

AMANOGAWA. Light pink, semi-double. Growth remarkably slender
and upright requiring little space.

ANEMONE. Pink, semi-double. Flowers formed like Anemone or Hepatica. Bears a tremendous crop of flowers.

ASAHI. Pale pink, very double, 35 to 40 petals. Flowers borne on long stems. Somewhat similar to Victory but new leaves are green, not, bronze.

BIZARRE. Not described in any of the standard reference books so we have given it a temporary name. Flowers of medium size, very double, variegated and striped green and white. With age the flowers show cerise veining. Most unusual and striking.

CAMPANULATA. The only truly red cherry. Flowers single, bell shaped. Three weeks earlier than any other variety. Growth extremely vigorous.

Shumer zalana

FLOWERING FRUIT TREES

U ACLASO "

- DAYBREAK. An unidentified variety. Extremely early. Flowers single pink borne entirely before the leaves and in such profusion as to make the tree look like a cloud of pink. The most effective variety in our collection. Growth strong.
- FUGENZO. Double pink. Flowers very large, up to 2 inches diameter. At first almost red but quickly become lighter in center. Flowers appear progressively so has a long blooming period.
- GOSHOZAKURA. Clear pink. Double. As Japanese name indicates, the flowers are almost always in clusters of five. Very pretty. Grows rather slowly.
- HORINJI. Double flesh pink. Flowers large, about 20 petals on long stems and in large clusters. Very profuse and is in bloom for a long time. Seems hard to propagate so that we have not been able to offer it until now.
- JUGATSUZAKURA (P. subhirtella autumnalis). Name means October cherry. This occasionally blooms in the Fall but usually in the very early spring. Flowers are single, long narrow petals, light pink with cerise at the tips and on the back. Flowers nearly one inch in diameter. Very beautiful. Has the longest blooming period of all.
- KAIDO. Semi-double pink. Color clear and bright. So closely resembles Halliana or Parkmanni Crab that we have given it the name the Japanese use for that variety.
- KURAMAYAMA. A beautiful double flowered variety opening out rather flat. The center is flesh pink but marked with carmine at the edges. The petals are ruffled or frilled. Late.
- MOMIJIGARI. A subhirtella variety, so has small flowers which are red in the bud but open deep pink. Semi-double, about 15 petals.
- NADEN. One of the loveliest and most double of the pink flowered varieties. The petals are so numerous as to make the flower a perfect tuft showing no center. This is not the Naden of Wilson.
- OJOCHIN. The "large paper lantern" cherry. Flowers are practically single but are so large with heavily pleated petals that they look double. Buds pink, open flowers flesh.
- SHIROTAE (Mt. Fuji). The best double white. Flowers are large and double. Foliage light green. A good grower. Also known as Komatsunagi-zakura.
- SHOGETSU. Double, pale pink. Very free bloomer.
- TAIZANFUKUN. Flowers of medium size, double and tufted. Light pink becoming flesh or nearly white. Leaves small. The tree grows unusually erect and slender.
- TAKASAGO. This is the cherry that Wilson calls Prunus sieboldi. Flowers are double, light pink on rather short stems and massed into large compact clusters. Blooms early before the leaves appear. Very showy.
- TAKINIOI. Flowers of medium size, single and semi-double. Buds flesh, open flowers white. Valued for its delightful fragrance.
- TANKOSHINJU (Pink Pearl). Double pink. Considering everything, growth, color, freedom of bloom, size of flowers and all other points, we consider this the best of the doubles. It is early, flowers are large, fairly double, pink with lighter center, but deeper at edges and on the back. A good grower making a fine symmetrical tree, healthy and most profuse bloomer.
- UKON. Unique in having yellow flowers, somewhat greenish. When the flowers get old the center and the veins of the petals change to cerise. A good grower. Late.
- VICTORY. Also known as Shirofugen. Flowers extremely large, up to 2½ inches diameter, borne in racemes of about three on a long stem. Very double, 35 to 40 petals. Coloring very unique. Flowers open a pale pink, become white and then turn cerise. For this reason trees will always show white and pink flowers at the same time.
- YAMAZAKURA No. 67963. A good double pink.
- YEDOZAKURA. Double pink. Color bright and clear. Flowers large, double, usually in clusters of three. Very pretty.

WEEPING VARIETIES

- DOUBLE PINK WEEPING. One of the scarcest varieties in our collection. Branches droop but not as strongly as the single weepers. Flowers are of medium size and double, 50 to 60 petals. Color deep pink. Has to be top grafted to make a good tree.
- EUREKA WEEPING (P. subhirtella pendula; Japanese Weeping Rose Flowering Cherry). This is the common, single flowered, light pink Weeping Japanese Cherry that has been grown in this country at least fifty years which is a tribute to its beauty and popularity.
- PARK WEEPING (P. acquinoctialis pendula rosea). It is as strongly drooping as Eureka Weeping but differs in its more vigorous growth, type of foliage and most important the color of the flowers which are deep pink instead of light pink.
- SHIDAREYOSHINO, Flowers single white. Growth very vigorous. Branches grow directly downward.

GENERAL COLLECTION (Continued)

Condorcet—Almost pure blue. Semi-double. D-E-F.

Edouard Andre—Rose or nearly pink. D-F-G.
Ellen Willmott—Snow white. Elegant spikes; fine large flowers of the "hose in hose" type. D-E-G.

Emile Gentile-Bright cobalt-blue. B-C.

Georges Bellair-Carmine becoming purple. Very profuse and compact. E-F-G.

pact. E-r-G.
Hippolyte Maringer—Purplish mauve; compact clusters. D-E-F-G.
Jean Bart—Carmine becoming rosy purple. Petals sharp and twisted.
Unique. E-F-G.
Jean Mace—Mauve changing to bluish purple. Very good. A-B-C-D-E.

D.E. Jeanne d'Arc—White. Flowers very large. Very early, profuse and fine in every way. E.F-G.
La Tour d'Auvergne—Dark lilac. Good. F-G.
Leon Gambetta—Pink-lilac. Early. Among the best. B-C-D-E-F-G.
Marechal Lannes—Mauve becoming pinkish blue. Beautiful color.
C-D-E-F-G.
Maximowicz—Violet heliotrope. Clusters long and well filled. F-G.
Montaigne—Pinkish mauve. Very large clusters. C-D-E.
Pressident Loubet—Deep purple becoming reddish lilac. C-D-G.
President Viger—Purple becoming lilac. Clusters large and dense.
D-E.

*Vauban-

Vauban—Pale mauve pink. Panicles large. Delicious fragrance. Extremely free bloomer. Strong grower. A-B-C-D-E. Victor Lemoine—Pinkish purple becoming mauve blue. Clusters much forked. Strong fragrance. C-E. Waldeck-Rouseau—Double. Deep violet flowers, borne in long trusses. D-E-F.

*Buffon—Flowers large, pink shaded mauve. A-B-C-D-E-F.

*SINGLE VARIETIES

*Buffon—Flowers large, pink shaded mauve. A-B-C-D-E-F.
Christopher Columbus—Opens clear blue. Late. E-F-G.
De Miribel—Dark bluish violet. Very late. C-D-E-F-G.
*Pescartes—Mauve blue. Exceedingly free blooming. Flowers before leaves appear. B-C-D-E.
Diderot—Deep purple; buds almost black. Clusters very long and narrow. F-G.
Dr. Breitschneider—Pure pink. Blooms on new wood, hence late. D-E-F-G.
Dr. Lindley—Brilliant violet-purple, buds red. Fine regular clusters. D-E-F-G.
Edmond Boissier—Dark purple. Flowers very large. B-C-D-E-F-G.
Gloire de Lorraine—Dark lilac becoming blue. D-E.
Hugo Koster—Reddish purple. Clusters of good size and regular form.
D-E.
*Lamartine—Mauve pink. Clusters much feeled. Fl.

D-E. *Lamartine—Mauve pink. Clusters much forked. Flowers large. Extremely vigorous and one of the earliest. A-B-C-D-E-F-G. *Louvois—Purple becoming blue. Clusters extra large. C-F-G. Ludwig Spaeth—Dark purple. Clusters long and slender. Late. C-D-E-F. Lutece—Pink. Very late. Blooms on new wood. C-D-E. Marie Le Graye—White. Early. An old favorite. D-E-F. *Mirabeau—Mauve. The earliest of all. Extremely vigorous. B-C-D-F-G.

F-G

Mont Blanc—White. Large flowers and clusters. Very fragrant. C-D-E-F-G.
Perle von Stuttgart—Pure white. Both flowers and clusters very large. C-D-E-F.
Vestale—White. Flowers large. Our earliest white variety. Very fine. C-D-E.

C-D-E.

*Varieties starred are the new "Early Lilacs." These are hybrids between Syringa giraldi and the earliest varieties of S. vulgaris. They are very distinct from previous varieties in both appearance and habit. They are ten days to two weeks earlier and the clusters are borne well above the foliage at the ends of long erect branches. Leaves are only partially developed when they bloom. These features give them very great value as cut flowers. We recommend them highly highly.

TAMARIX pentandra, FIVESTAMEN TAMARIX This is the pink flowering type that blooms all summer. Also called T. hispida aestivalis.	rate	rate

We can supply collected roots for shipment from Santa Cruz
Mountains direct to customers at \$7.50 per 100. No shipment of
less than 50.

Roses

BUSH AND STANDARD

We grow both bush and standards extensively and specialize on the best of recent sorts. As this list goes to press we are digging and do not want to issue new list until that job is completed and we know just what is unsold.

Revised list corrected down to date will be issued in early December. If you are interested write us for a copy. For descriptions of all varieties offered see our List No. 3109 which will be sent on request.

request.
